Additional Green Spots Created in South Campus Gateway Parking Garage

South Campus Gateway is a leader in applying Green practices in a business setting. Gateway has continued this momentum with the addition of 22 Green Spots to the South Campus Gateway Parking Garage. The total 58 Green Spots provide short-term, premium parking spaces for low-emission vehicles.

“The original 36 Green Spots were full every morning by 10 a.m.,” says Charlie Tischler, Director of Parking Services. “The expansion of two additional rows in the garage rewards even more fuel-efficient drivers while reducing our carbon footprint.”

Denoted by large banners, green walls, and the ‘Green Spot’ logo, these premium spots are closest to the shops, eateries, and attractions in the Gateway. All visitors driving qualified vehicles are eligible for these spaces. To see what vehicles qualify as low emission, please refer to <http://www.southcampusgateway.com/announcements/goesgreen.php>.

The Green Spot Initiative is another way South Campus Gateway is working to promote environmental awareness, recycling, and energy efficiency. The program is designed to inform and educate Gateway guests, tenants, office workers, residents, and patrons of the leadership role South Campus Gateway has taken on by applying Green initiatives in a business environment. Additionally, South Campus Gateway has found success with their recycling program, 19 tons of waste was recycled last month. Green Spot parking is not permitted overnight. For more parking information, please refer to <http://www.southcampusgateway.com/doc/parking> or contact Charlie Tischler, Director of Parking Services at 614-247-5888 or parkit@southcampusgateway.com.

Campus Partners is an OSU affiliated entity whose mission is to lead the revitalization of the urban neighborhoods around Ohio State’s Columbus campus.
